

Kratiste heart shaped plant support

What do you need?

- 2 Kratiste plant support sticks
- Hairdryer
- Pruning shears
- Coldwater in a big, flat dish.
- Soldering iron

How do you make it?

- Print out the Kratiste Heart shaped plant support figure.
- Use one stick for the left side of the heart, one stick for the right side of the heart.
- Cut both sides of the stick obliquely, so you can connect the pieces of the heart later on with the soldering iron.
- Lay the first Kratiste plant support stick over the figure of the heart, starting with the end, the piece you use to stick in the soil.
- Get the hair dryer and blow at the point you want to bend for 50 seconds.
- Bent the first part of the heart, hold it and cool it in the water for approximately 10 seconds.
- Repeat the previous two steps until you shaped the first side of the heart.
- Use the second stick to make the other side of the heart in the same way you formed the first side

How do you put it all together?

- Use the soldering iron to 'glue' the pieces together. CAUTION: the Kratiste stick gets really hot from the soldering iron!
- Heat up both ends of the heart shape.
- When both heated up, press them against each other and let them cool down in the water.
- Repeat the two previous steps with the other side of the heart, the peace you stick in de soil
- Press them together when hot, hold them against each other and place in the water to cool down.
